No pipetting, no drips, no timing:
Collecting an oral fluid sample is quick and easy with the Dräger DrugTest® 5000. The collected sample can then be analysed immediately for accurate results on the spot.

**SAMPLING AND ANALYSIS IN ONE SYSTEM**
The drug analysis system Dräger DrugTest 5000 consists of the sampling system Dräger DrugTest 5000 Test Kit and of the analyzer Dräger DrugTest 5000 Analyzer. This provides you with anything you need for a first assessment on the spot.

**EASY AND FAST SALIVA SAMPLE COLLECTION**
Ready for immediate use, if necessary
The Dräger DrugTest® 5000 test kit provides you with a ready-for-use sampling system. You want to check a suspect person? Just remove the cover and hand the test cassette over to the test person.

**Hygienic and painless:**
Collection without blood samples
The test person moves the top part of the collector briefly back and forth between his cheek and gums until the integrated indicator signals that enough of a sample has been collected. This usually takes less than a minute and never more than four minutes. The test person returns the cassette to you – and you will not come in contact with the saliva sample.

**Blue means sample collection finished**
The Dräger DrugTest 5000 automatically indicates the end of the sample collection process: If the collector has collected enough saliva, the indicator becomes blue and the sample collection process is finished. Afterwards you insert the test cassette and cartridge directly into the Dräger DrugTest 5000 Analyzer for evaluation.

**OTHER ADVANTAGES OF THE DRÄGER DRUGTEST 5000 TEST KIT:**
- high degree of conformity with blood samples and the detection limits valid in Germany (confirmed by a field test by the German Police University)
- extremely low detection limit for THC as the main active ingredient of cannabis
- clear results display
- hygienic sampling and analysis
- high level of acceptance among users and test persons
- easy to use even with safety gloves
- different configurations available (depending on model, several substances can be detected at the same time)
- can be used at temperatures between 4 °C and 40 °C
- can be stored in original package without any deterioration at up to 30 °C
DRÄGER DRUGTEST 5000 ANALYZER

IMMEDIATE EVALUATION OF SAMPLES
Insert test cassette and cartridge, start evaluation, ready
The saliva sample can be evaluated immediately after sample collection. Just insert test cassette and cartridge into the analyzer – the evaluation will start immediately.

Easy and safe operation – even under adverse conditions
Even when it becomes hectic: you control the analyzer with only three keys. The operation is menu-driven. Just follow the plain text instructions.

Quick and comfortable: results in just a few minutes
Once the device is put into operation, the analysis will run automatically. This keeps your mind clear and your hands free for attending to your test persons. After only a few minutes, the result will be displayed.

Easy-to-read colour display
The colour display is illuminated. Thus, you stay on top of the situation even under reduced visibility conditions. You can read the display text without any problems even from some distance or from an angle.

Clear measuring results without interpretation
The Dräger Drugtest 5000 Analyzer also displays the measuring results in clear text. Therefore, misinterpretations do not occur.

Convenient carrying handle
can easily be carried with one hand – even without bag

Backlit colour display
clear menu navigation and results display – even in low light conditions

Robust housing
also suitable for harsh outdoor environments

Three-button operation

Large analysis chamber opening
automatic test run without manual intervention

D-54720-2012
Evaluating samples wherever the situation demands
Whether you use the sampling system with the 230 V power supply or the 12 V car adapter included, the permanently integrated, rechargeable battery makes you independent of any external power source and the analyzer is ready to use anytime and anywhere.

Storing 500 measuring results and managing them easily
It stores the last 500 measuring results including date and time. You can enter further measurement details via keyboard or barcode reader. You can print the results with the Dräger Mobile Printer directly on the spot. To document the data, you can transmit them on the PC via USB.

4.5 kg lightweight for transportation

The analyzer is easy to carry. For transporting the device and its accessories easily and safely, Dräger provides a matching carrying bag or a robust transport case.

OTHER ADVANTAGES OF THE DRÄGER DRUGTEST 5000 ANALYZER:
– integrated self-test function: no semi-annual calibration necessary
– a variety of accessories (e.g. carrying bag, battery charger or compact keyboard)

THE SYSTEM DETECTS A VARIETY OF SUBSTANCES SUCH AS:
– Amphetamines
– Benzodiazepines
– Delta-9-tetrahydrocannabinol (THC)
– Cocaine
– Methamphetamines
– Opiates
– Methadone
– Ketamine
– Remove the cover
– Pass test cassette on to test subject

– Test subject moves the collector back and forth in his mouth until the indicator becomes blue

– Insert test cassette and cartridge into the analyzer. Close the door. The analysis will start automatically.
– After a few minutes, the result will be displayed
Dräger SSK 5000:
Detecting drugs on surfaces or in substances
You want to know on the spot whether drug traces are detectable on a steering wheel or if the contents of a suspicious bag contain drugs? Easily answer such questions by taking a sample with the Dräger SSK 5000 drug sampler and transferring the specimen to the Dräger DrugTest 5000 Test Kit. Then you can analyse the sample with the Dräger DrugTest 5000 Analyzer.
TECHNICAL DATA

Operating voltage: 12 V direct voltage (via supplied power pack)

Power input: normally 3 A

Dimensions (W × H × D): 200 × 260 × 250 mm

Weight: 4.5 kg

Operating range:
- Operation: 4 °C to 40 °C
- Storage / transportation: -20 °C to +60 °C
- Relative humidity: 5 to 95 % (non-condensing)

Ports:
- Optical for printer, PS/2, USB Slave

Time of measurement:
- Depending on used test kit (typically < 9 minutes)
- Optional: Analysis in < 5 minutes by increasing the THC cut-off to 25 ng/ml (after updating the device software)

Storage capacity:
- 500 records or measurements
