WORK POSITIONING BELT 24-CAT

WORK POSITIONING BELT 24-C AT

Applications

The CLIMAX 24-C AT work positioning belt is specially designed and manufactured for use while working under conditions where there is some risk of falling from heights. The belt allows the user to safely and securely anchor himself to the structure on which he is working to achieve full fall protection.

Characteristics:

The Climax 24-C AT belt is manufactured using exceptionally strong materials capable of withstanding the harshest work conditions while continuing to provide full protection. The restraining belt has the following components:

- Padded Sash:

The padded sash is foam-filled to prevent user discomfort and designed for a snug fit at the lower back. The padded sash is sewn to the waist belt. It's manufactured with 16 mm thick high density foam which is molded.

- Waist belt:

The waist belt is made of highly resistant fluorescent green polyester strap with a width of 45 mm. The waist belt contains two D-rings used to secure the user to the anchorage point. A snug fit is obtained by adjusting the belt length with the buckles.
